

European Alliance for  
Personalised Medicine

**Unlocking the value of clinical research  
to provide evidence for today and  
tomorrow's discoveries to improve  
patient care**

**D. HORGAN, EAPM**

European Alliance for  
Personalised Medicine

# BACKGROUND

- **Kick-Off:** ESMO Congress, Madrid - EAPM organized a roundtable to bring together multiple stakeholders to address how Europe can stay at the forefront of clinical research in oncology in personalized medicine
- **Why?**
  - clinical trials supporting personalised medicine:
    - require new approaches,
    - relevant stakeholders need to align on how:
      - to best organize these studies
      - to establish the right evidence
      - by tailoring access to smaller populations who may benefit from a particular treatment.

All stakeholders need to align and agree on **Evidence requirements** (quality, safety & effectiveness, and health economics) to support the rapid introduction of personalised medicine

- *Patients*
- *Medical professionals*
- *Pharmaceutical company*
- *Diagnostic company*
- *Clinical Investigator*
- *Regulators*
- *HTA bodies*

## 5 Questions to be addressed:

1. *What solutions could be offered to optimize research to better address the objectives of different stakeholders with competing interests*

## 5 Questions to be addressed:

- 2. What solutions could be offered to optimize the finite opportunities to address important clinical questions in research?*
- 3. What solutions could be offered to increase cross border collaborations especially among different stakeholders?*

## 5 Questions to be addressed:

- 4. What solutions can be offered to better incentivize the successful development of biomarkers that can accelerate personalized medicine?*
- 5. What solutions could be offered to optimize information sharing regarding existing research to avoid suboptimal clinical decision making that can delay the implementation of best practices in clinical research and practice?*

# *Questions & Responses*
